- Examining other chatbot repos
- Proof of Concept Deployment
- Technology selection

Methodology

Roadmap (Phased)

1. MVP: Document library + single-question answering with references.
2. Tag filtering + history of Q&A.
3. Bulk questionnaire support (CSV).
4. Collaboration features (approvals/discussions).
5. UI enhancements + analytics.

- Agile/Scrum, two week sprints, Asana
- Started with Proof of Concept -> MVP
- Often tackled unrelated bugs/improvements while working on major features
- Questionnaire mode stretch goal reached

Problems Encountered & Solutions

- Starting, loading, switching between chats
- Displaying policy name, version in references
- Bedrock Knowledge Base - tag filtering, policyName vs policyname

Acceptable Use

Data Protection

Data Protection

Based on the retrieved results, Data Protection refers to all data collected from employees, candidates, users, customers, vendors, or other parties that provide information to ServisBOT. The data will be accurate, kept up-to-date, collected fairly and for lawful purposes only, processed by the company within its legal and ethical boundaries, and protected against any unauthorized or illegal access by internal and external parties. The data will not be communicated informally, stored for more than the amount of time specified in our Terms of Service, Privacy Policy, customer contracts, or other binding agreements, downloaded to unapproved devices, transferred to organizations, states, or countries that do not have adequate data protection policies, or distributed to any party other than the ones agreed upon by the data's owner (exempting legitimate requests from law enforcement authorities).

References: Data Protection, Page 1

Acceptable Use

Filters Used top

The Acceptable Use Policy at ServisBOT outlines guidelines for the use of company resources, including systems, networks, and proprietary information. It emphasizes the importance of using these resources for business purposes and maintaining security measures. The policy prohibits activities such as unauthorized copying of copyrighted material, exporting controlled technology without proper authorization, and introducing malicious programs into the network. It also addresses acceptable use of email and communication activities, emphasizing professional conduct and the prohibition of harassment or discriminatory comments. Compliance with the policy is monitored, and violations may result in disciplinary action.

Use of AI

1. Schema Design
2. Code Reviews (CodeRabbit, Claude)
3. Frontend (scaffolding pages, Chat)
4. Debugging
5. JSDoc/Swagger

The Recommended Schema: "The Versioned-First approach"

Instead of a separate `details` record, we treat the **Current Version** as the "Source of Truth" for the policy metadata.

1. The Main Table

Partition Key (PK)	Sort Key (SK)	Attributes (Metadata)
<code>POLICY#<PolicyId></code>	<code>METADATA</code>	<code>policyName</code> , <code>description</code> , <code>tags</code> , <code>syncedStatus</code> , <code>currentVersion</code> , <code>latestStorageKey</code>
<code>POLICY#<PolicyId></code>	<code>VERSION#002</code>	<code>versionDetails</code> , <code>storageKey</code> , <code>createdAt</code>

⚠️ *Potential issue* | 🔴 *Critical*

Copy-paste error: wrong variable used for error message.

Hey Copilot! I'm experiencing a lot of issues with the new conversation feature of my app. Right now, I can see a message send, but then it disappears. I can't view other conversations either. Could you help?

TS routes.ts ⚙️ chat.tsx ⚙️ chat.tsx ⚙️ useConversation.tsx

Collecting workspace information

I'll help you debug the conversation feature issues. Looking at your code, I can identify a few problems in the `useConversation` hook that are causing messages to disappear and conversations not to load properly.
